

Accessibility Improvement Case Study

Example from an Online Course Redesign Process

| Design Element | Before Redesign | After Accessibility Improvements |
|----------------|-----------------------------------|---|
| Images | Images lacked alt text. | All images include descriptive alt text. |
| Videos | Videos embedded without captions. | All videos include captions and summaries. |
| Course Layout | Inconsistent module layout. | Consistent weekly structure across modules. |
| Links | Used 'click here'. | Descriptive link text used throughout. |
| Documents | PDF readings unstructured. | Documents include headings and accessible formatting. |

This example demonstrates how accessibility considerations were incorporated during the instructional design process. Improvements focused on navigation clarity, accessible media, and inclusive content formatting.
